

W-W Shredder-Grinders for Gravely Tractors

Model 5-VL. Capacity of 5 cubic yards per hour.

The same new design features of the 5-20-VL are built in the smaller model 5-VL. 8" cylinder operates at 2,700 rpm to allow operator to grind*, shred, screen or mix. And rust-resistant cast iron main frame ensures the high speed ball bearings and drive shaft are kept in perfect alignment.

*Not designed for grinding tree limbs.

Model 5-20-VL. Shreds or grinds up to 12 cubic yards per hour.

Feed in almost any kind of composting material, from leaves to 3" diameter tree limbs, to phosphate rocks. The W-W 5-20-VL can tackle it!

It's designed specifically to attach to all 2-wheel Gravely convertible tractors and is powered directly off the tractor's PTO. An important new feature of the 5-20-VL is the "quick hitch" design for easy hook-up. You simply slide the U-joint coupler onto the tractor's PTO shaft and insert the hitch pin through the Gravely pivot pin. That's it!

Big 20" wide x 9" diameter grinding chamber means capacity! And W-W's exclusive interchangeable shredding roller bars and grinding screens are standard so you can shred or grind as desired or as material requires. Screens and rods can be installed or removed quickly without the use of tools.

Heavy-duty 20" cylinder features high-quality hammermill-type hammers with high-carbon hammer tips for efficient cutting. And, hammers can be reversed to double their life. The 5-20-VL also has dual 10" diameter wheels in front for good flotation even on soft ground.
